[FULLY FICTITIOUS DOCUMENT · FOR FAIRPANEL LIVE DEMO] All entities, metrics, and profiles are created for multimodal OCR and fair assessment demonstration.

CANDIDATE IDENTIFIER: FP-C02 · PROFESSIONAL RESUME

Doyun Kim — Senior FinTech Backend & Core Systems Engineer

- **Candidate Name:** Doyun Kim (FP-C02)
- **Years of Experience:** 6 Years Professional Software Engineering (FinTech & High-Concurrency Systems)
- **Core Focus:** High-Throughput Settlement Engines, Distributed Locking, Deadlock Resolution, Fault Tolerance
- **Key Technologies:** Java, Kotlin, Spring Boot, Kafka, Redis (Redisson), PostgreSQL, Docker, AWS
- **Target Alignment:** Scalable data reconciliation, high-reliability ledger audits, and compliance automation

Core Technical Experience & High-Impact Incidents

Experience 1 **3,500 TPS Black Friday Payment Deadlock Resolution & Emergency Hotfix**

• Incident Response: During Black Friday peak traffic reaching 3,500 TPS, mutual database lock contention between simultaneous checkout and inventory deduction caused severe thread pool exhaustion.
• Root Cause Analysis: Identified circular wait locks between payment ledger inserts and inventory row updates across legacy distributed transactions.
• Emergency Hotfix: Authored an immediate non-blocking Redis distributed lock hotfix that resolved lock contention within 12 minutes, stabilizing payment success rates to 99.98%.
• Operational Transparency: In order to mitigate multimillion-dollar service downtime during active peak shopping hours, bypassed standard staging QA sign-off with VP-Engineering verbal approval, followed by comprehensive post-mortem regression testing.

> *Scope Boundary: Hotfix decision was executed during Sev-1 critical outage; authored full regression test suites and architectural safeguards during post-incident review.*

Experience 2 **8-Month Intentional Career Break & Open-Source Architecture Contributions**

• Professional Deep-Dive: Dedicated an 8-month intentional career sabbatical (July 2025 – February 2026) to rigorous open-source systems research and deep distributed systems engineering.
• Contributions: Authored 14 merged pull requests to upstream distributed consensus and database connector repositories, including optimized transaction retry backoffs.
• Continued Growth: Completed advanced technical certifications in distributed transaction architectures and zero-trust security.

> *Scope Boundary: Period was dedicated entirely to technical skill enhancement, open-source code contributions, and systems design.*

Professional Statement & AI-Assisted Documentation

• Engineering Philosophy: 'Building fault-tolerant financial and operational data architectures where every single transaction, reconciliation ledger, and state change is mathematically provable, immutable, and traceable.'

• Disclosure Notice: A portion of the conceptual overview in this application was structured and edited utilizing generative AI tools to ensure concise, professional articulation of complex distributed systems principles.
